STUDENT EVENT PARTICIPATION SYSTEM

A PROJECT REPORT

Submitted By

AJAY KUMAR
(2100290140009)
HARSHIT SAXENA
(2100290140069)
ANAMIKA MANI
(2100290140025)

Submitted in partial fulfilment of the Requirements for the Degree of

MASTER OF COMPUTER APPLICATION

Under the Supervision of
MR. AMIT KUMAR GOYAL
Associate Professor
KIET Group of Institutions, Ghaziabad

Submitted to

DEPARTMENT OF COMPUTER APPLICATIONS
KIET Group of Institutions, Ghaziabad
Uttar Pradesh-201206

(JUNE 2023)

DECLARATION

I hereby declare that the work presented in this report entitled "**Student Event Participation System**," was carried out by me. I have not submitted the matter embodied in this report for the award of any other degree or diploma from any other University or Institute. I have given due credit to the original authors/sources for all the words, ideas, diagrams, graphics, computer programs, experiments, and results, that are not my original contribution. I have used quotation marks to identify verbatim sentences and given credit to the original authors/sources. I affirm that no portion of my work is plagiarized, and the experiments and results reported in the report are not manipulated. In the event of a complaint of plagiarism and the manipulation of the experiments and results, I shall be fully responsible and answerable.

Name: Ajay Kumar
RollNo:2100290140009

Name: Harshit Saxena
RollNo:2100290140069

Name: Anamika Mani
RollNo:2100290140025

(Candidate Signature)
Branch: MCA (4thSem)

CERTIFICATE

Certified that **Ajay Kumar (2100290140009), Harshit Saxena (2100290140069), Anamika Mani (2100290140025)**, have carried out the project work having "**STUDENT EVENT PARTICIPATION SYSTEM**" for Master of Computer Applications from **Dr. A.P.J. Abdul Kalam Technical University (AKTU)** (formerly UPTU), Technical University, Lucknow under my supervision. The project report embodies original work, and studies are carried out by the student himself and the contents of the project report do not form the basis for the award of any other degree to the candidate or to anybody else from this or any other University/Institution.

Date:

Ajay Kumar (2100290140009)
Harshit Saxena (2100290140069)
Anamika Mani (2100290140025)

This is to certify that the above statement made by the candidate is correct to the best of my knowledge.

Date:

Mr. Amit Kumar Goyal
Associate Professor
Department of Computer Application,
KIET Group of Institutions, Ghaziabad

Signature of Internal Examiner **Signature of External Examiner**

Dr. Arun Kumar Tripathi
Head, Department of Computer Applications
KIET Group of Institutions,
Ghaziabad

ABSTRACT

The abstract of student event participation refers to the involvement of students in various extracurricular activities, events, and programs organized by educational institutions or student clubs. Such events can be academic, cultural, social, or sports-related, and provide students with opportunities to showcase their skills, learn new things, meet new people, and have fun. Participation in events can have various benefits, including developing leadership skills, building confidence, enhancing teamwork, improving communication, and promoting a sense of belonging and community. Examples of student events include debates, hackathons, talent shows, cultural festivals, sports competitions, charity events, workshops, and conferences. Overall, student event participation contributes to the holistic development of students by providing them with diverse experiences and opportunities to grow personally, socially, and professionally.

This student event participation is designed to promote and showcase student event participation, providing resources and information to students, educators, and event organizers. The website aims to encourage students to get involved in extracurricular activities, programs, and events that offer a wide range of benefits beyond academics. The student event participation features a comprehensive list of upcoming student events, with information on location, date, time, and registration. It also includes details about past events, providing a platform for student organizers to share their experiences and successes.

This creates a sense of community and encourages collaboration between students, educators, and event organizers.

ACKNOWLEDGEMENTS

Success in life is never attained single-handedly. My deepest gratitude goes to my thesis supervisor, **Mr. Amit Kumar Goyal** for his guidance, help, and encouragement throughout my research work. Their enlightening ideas, comments, and suggestions.

Words are not enough to express my gratitude to **Dr. Arun Kumar Tripathi**, Professor, and Head of, the Department of Computer Applications, for his insightful comments and administration help on various occasions.

Fortunately, I have many understanding friends, who have helped me a lot in many critical conditions.

Finally, my sincere thanks go to my family members and all those who have directly and indirectly provided me with moral support and other kinds of help. Without their support, completion of this work would not have been possible in time. They keep my life filled with enjoyment and happiness.

Ajay Kumar
Harshit Saxena
Anamika Mani

CHAPTER 1

1. INTRODUCTION

The main purpose of this project is to provide the ease to the staff of our college to find out the student participation in the events. As it is too difficult to find such information, so our project provides the student participation information to the staff or faculty. Student event participation is a crucial aspect of a well-rounded and holistic educational experience. Extracurricular activities, programs, and events offer students opportunities to develop a wide range of skills, including leadership, teamwork, communication, and problem-solving. Participating in events also promotes a sense of community and belonging on campus, which can have a positive impact on students' mental health and well-being. In recent years, there has been a growing emphasis on the importance of student event participation in higher education. Educational institutions and student organizations are increasingly promoting and encouraging student participation in extracurricular activities and events. This has led to an increase in the number of events offered, as well as an expansion of the types of events available.

However, there is still a need for more resources and information to support student event participation. Many students are unaware of the benefits of participating in events or may be unsure of how to get involved. Additionally, event organizers may struggle with planning and executing successful events or may be unsure of how to encourage student participation.

This is where this website comes in. It is designed to promote and showcase student event participation, providing resources and information to students, educators, and event organizers. The website aims to encourage students to get involved in extracurricular activities, programs, and events that offer a wide range of benefits beyond academics. It provides a comprehensive list of events, resources, and testimonials to inspire and encourage student participation. Through this website, we hope to promote the value of student event participation and support the holistic development of students. We believe that participating in events is a valuable aspect of student life that provides numerous benefits beyond academics, and we are committed to providing resources and information to help students, educators, and event organizers make the most of these opportunities.

1.1 PROJECT DESCRIPTION

The over-project "**Student Event Participation System**" provides users to login into the project by enter their name, email, and other details and password links. The account verification link gets in the email, after clicking the link the account will get activated and the account and user can log into their account and sees the events and participate in it. The participated events are show on the dashboard where he /she sees all the events that he/ she participated in the events. For the event the user registered their details and select the payment method to pay the event participation fee. If the user selects by Debit card/credit card then the customer must enter their card details for doing the online payment functionality.

In this project, we give many modules that is make the website user friendly and easy to use the project.

1. **Create Account**: In this module, the user enters his /her name email id, and password and clicks the Continue button then the students/users get an account verification link in his email account and confirms his account
2. **Login Module**: In this module after the creation of the account the user login with the help of an email id and password, if a user forgot the password, then he/she reset the password
3. **Home Page**: On the home, page user sees the events, searches the for upcoming events, and if he wants to participate in the event, he/she easily participate in the event
4. **Admin**: Used for managing the database of the system. He can add, delete any information in the system
5. **Coordinator**: Manage all events
6. **Event-head**: Event manager can generate event by this module. They can edit, delete the information of any generated event.
7. **User**: User can register for event. Can easily check event details times and can contact event manager easily. They can register online for any events
8. **Log out Module**: On this module when the user clicks this he logs out from his account and his log in session is got over

In this project, we are using HTML, CSS, JavaScript, Python, Django, and SQLite for database.

The main features of this project are high accuracy, design flexibility, and easy availability. This website allows users/student to see and participate in the events. This project is an attempt to provide the advantages of online event participation to user. This Student Event Participation website allows users to participate in events from anywhere and anytime and it provides users to find more variety of events. This project

is designed from a user point of view. The user-friendly design helps the users in accomplishing their tasks with ease. Attempts have been made to keep the design.

1.2 PROJECT SCOPE

The purpose of this project is to create an online platform that enables students to actively participate in virtual events, such as conferences, webinars, workshops, and seminars. The platform will provide students with an engaging and interactive experience, allowing them to connect with speakers, ask questions, collaborate with peers, and access event resources. The project scope encompasses the development and implementation of the online platform, ensuring a seamless and user-friendly experience for student event participation.

1. **Features and Functionality**: The online student event participation platform will include the following key features:
2. **Event Registration**: Students will be able to browse and register for upcoming events of interest through an intuitive registration process.
3. **Event Schedule and Reminders**: The platform will provide a clear schedule of events, including session timings, topics, and speakers. Users will receive timely reminders and notifications about upcoming events they have registered for.
4. **Live Streaming and Video Conferencing**: The platform will facilitate live streaming of events, allowing students to watch presentations, panel discussions, and keynote speeches in real-time. It will also support interactive video conferencing for Q&A sessions and interactive workshops.
5. **Chat and Discussion Forums**: Students will have access to chat features to interact with event speakers, moderators, and fellow participants. Discussion forums will enable ongoing conversations and networking opportunities.
6. **Resource Library**: The platform will host a repository of event-related resources, including presentation slides, handouts, recordings, and supplementary materials for students to access before, during, and after the event.
7. **Polls and Surveys**: The platform will allow organizers to conduct polls and surveys to gather feedback, opinions, and preferences from students. This will help in improving future events and tailoring content to student interests.
8. **Gamification and Rewards**: To enhance engagement, the platform may incorporate gamification elements, such as badges, points, and leader boards, to recognize active participation and incentivize student involvement.

1.3 HARDWARE & SOFTWARE REQUIREMENTS

The software environment used for developing the application is:

1. **Operating System** – Windows
2. **Code editor** – Microsoft Visual Studio Code

Hardware components required for installing all the required software environment and tools are:

1. **Processor** – Intel i3 5th generation or higher
2. **RAM** – Minimum 4 GB, recommended 8 GB
3. **space -** Minimum 5 GB of free disk space

CHAPTER 2

2. FEASIBILITY STUDY

A feasibility study assesses the operational, technical, and economic merits of the proposed project. The feasibility study is intended to be a preliminary review of the facts to see if it is worthy of proceeding to the analysis phase. From the systems analyst perspective, the feasibility analysis is the primary tool for recommending whether to proceed to the next phase or to discontinue the project. The feasibility study is a management-oriented activity. The objective of a feasibility study is to find out if an information system project can be done and to suggest possible alternative solutions.

2.1 TECHNICAL FEASIBILITY

Technical Feasibility determines whether the work for the project can be done with the existing equipment's software technology and available personals technical feasibility is concerned with the specified equipment and software that will satisfy the user requirement this project is feasible on technical remark also as the proposed system is beneficiary in term of having a soundproof system with new technical equipment's install on the system that proposed system can run on any machine supporting window and work on the best software and hardware that had been used while designing the system so it would be visible in all technical term of feasibility.

2.2 OPERATIONAL FEASIBILITY:

The new solution is possible in all sense but operationally is not the new system demands the explosion of at least 15 people from the company it creates an environment of joblessness and fear among the employees it can lead to indefinite Strike in the company also, so the management must take corrective action prior in advance to start further proceeding.

2.3 ECONOMICAL FEASIBILITY

With manual system the operation cost of this system is about 60 lacs for annual this cost comprises salary of Swiss 25 people's stationary, building rent, electricity water telephone etc. but with a new system this offering cost comes out to be about 20 lacs for renewal and the new system is economically feasible.

CHAPTER 3

DATABASE DESIGN

3.1 DATABASE TABLE

SQLite is an excellent choice for a project's database due to its lightweight and serverless nature. It does not require a separate server process, making it easy to embed within your project and eliminating the need for complex installations or configurations. With SQLite, managing and deploying databases is simple since they are stored as a single file, allowing for easy distribution and backup. Its cross-platform compatibility enables seamless application deployment on various operating systems. SQLite supports a subset of SQL, providing familiarity for developers and facilitating efficient data manipulation. It follows ACID compliance, ensuring data integrity, and its high-performance capabilities make it suitable for read-intensive workloads. With its maturity and wide adoption, SQLite has a strong community that offers support and frequent updates. Additionally, SQLite integrates well with different programming languages, thanks to its extensive ecosystem of libraries and connectors. However, it's important to consider alternative solutions for projects with high concurrency or heavy write operations from multiple clients simultaneously.
